AKTIVITAS 5

1. Buat Resource Controller: php artisan make controller MahasiswaController -resource --model-Mahasiswa

```
INFO  Controller [C:\laragon\www\GLOWFIT\app\Http\Controllers\MemberController.php] created successfully.

PS C:\laragon\www\GLOWFIT>
```

2. Daftarkan di routes/web.php: Route: resource('mahasiswa', MahasiswaController::class)

```php
use App\Http\Controllers\MemberController;

Route::resource('member', MemberController::class);
```

3. Buat semua view: mahasiswa/index.blade.php (tabel + pagination), create.blade.php (form), edit.blade.php (form pre-filled), show.blade.php (detail)

```
views
  member
    create.blade.php   U
    edit.blade.php     U
    index.blade.php    U
    show.blade.php     U
```

4. Implementasi method index() - ambil semua mahasiswa dengan paginate (10) dan tampilkan ke view

```php
public function index()
{
    $members = Member::paginate(10);
    return view('member.index', compact('members'));
}
```

5. Implementasi create() dan store() dengan validasi nim (unique), nama (min:3). email (emaillunique), jurusan (in:SI, TI,MI)

```php
class MemberController extends Controller
    public function create()
    {
        return view('member.create');
    }

    public function store(Request $request)
    {
        $validated = $request->validate([
            'kode_member' => 'required|unique:members,kode_member',
            'nama'        => 'required|min:3',
            'email'       => 'required|email|unique:members,email',
            'layanan'     => 'required|in:Basic,Premium,VIP',
            'foto'        => 'nullable|image|mimes:jpg,png|max:2048' // Bonus Poin 9
        ]);

        if ($request->hasFile('foto')) {
            $validated['foto'] = $request->file('foto')->store('members', 'public');
        }

        Member::create($validated);
        return redirect()->route('member.index')->with('success', 'Member berhasil ditambahkan!');
    }
```

6. Implementasi edit() dan update() tampilkan form dengan old() atau $Mahasiswa-> field, validasi unique kecuali ID ini

```php
public function edit(Member $member)
{
    return view('member.edit', compact('member'));
}

public function update(Request $request, Member $member)
{
    $validated = $request->validate([
        'nama'        => 'required|min:3',
        'email'       => 'required|email|unique:members,email,' . $member->id, // Kecuali ID ini
        'layanan'     => 'required|in:Basic,Premium,VIP',
        'foto'        => 'nullable|image|mimes:jpg,png|max:2048'
    ]);

    if ($request->hasFile('foto')) {
        if ($member->foto) Storage::disk('public')->delete($member->foto);
        $validated['foto'] = $request->file('foto')->store('members', 'public');
    }

    $member->update($validated);
    return redirect()->route('member.index')->with('success', 'Member berhasil diperbarui!');
}
```

7. Implementasi destroy() dengan konfirmasi JavaScript sebelum hapus

```php
    public function destroy($member)
    {
        if ($member->foto) Storage::disk('public')->delete($member->foto);
        $member->delete();
        return redirect()->route('member.index')->with('success', 'Member berhasil dihapus!');
    }
}
```

8. Tambahkan flash message di layout dan tampilkan session(success)/session('error')

```blade
@if(session('success'))
    <div style="padding: 15px; background-color: #d4edda; color: #155724; margin-bottom: 20px;">
        {{ session('success') }}
    </div>
@endif

@if(session('error'))
    <div style="padding: 15px; background-color: #f8d7da; color: #721c24; margin-bottom: 20px;">
        {{ session('error') }}
    </div>
@endif
```

AKTIVITAS 6

1. Instal Laravel Breeze: composer require laravel/breeze --dev, kemudian php artisan breeze install blade

```
PS C:\laragon\www\GLOWFIT> composer require laravel/breeze --dev
>> php artisan breeze:install blade
./composer.json has been updated
Running composer update laravel/breeze
Loading composer repositories with package information
Updating dependencies
Lock file operations: 1 install, 0 updates, 0 removals
  - Locking laravel/breeze (v2.4.1)
Writing lock file
Installing dependencies from lock file (including require-dev)
Package operations: 1 install, 0 updates, 0 removals
  - Downloading laravel/breeze (v2.4.1)
  - Installing laravel/breeze (v2.4.1): Extracting archive
Generating optimized autoload files
> Illuminate\Foundation\ComposerScripts::postAutoloadDump
> @php artisan package:discover --ansi

  INFO  Discovering packages.

Use the `composer fund` command to find out more!
> @php artisan vendor:publish --tag=laravel-assets --ansi --force

  INFO  No publishable resources for tag [laravel-assets].

No security vulnerability advisories found.
Using version ^2.4 for laravel/breeze

  INFO  Installing and building Node dependencies.
```

2. Jalankan php artisan migrate untuk membuat tabel users

```
PS C:\laragon\www\GLOWFIT> php artisan migrate

  INFO  Running migrations.

  2026_05_05_150726_create_kelas_gyms_table ..................................... 23.64ms DONE
  2026_05_05_150751_create_member_kelas_table ................................... 111.25ms DONE
```

3. Jalankan npm install && npm run dev untuk build assets

```
PS C:\laragon\www\GLOWFIT> npm install

up to date, audited 140 packages in 2s

34 packages are looking for funding
  run `npm fund` for details

found 0 vulnerabilities
```

```
PS C:\laragon\www\GLOWFIT> npm run dev

> dev
> vite

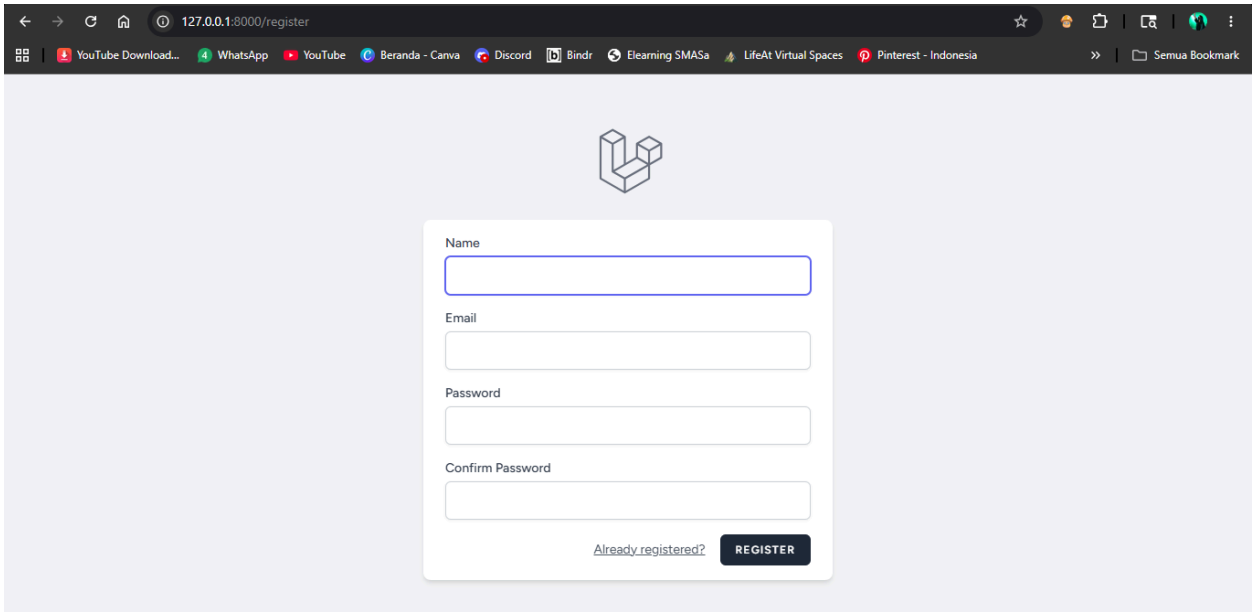
  VITE v8.0.12  ready in 416 ms

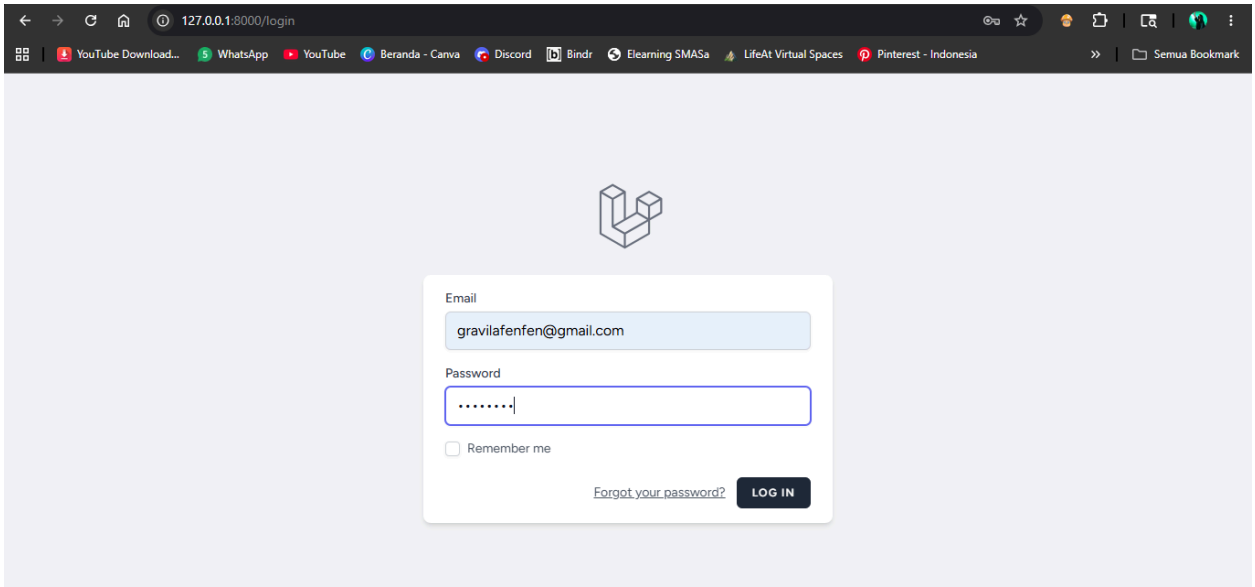
  ➜  Local:   http://localhost:5173/
  ➜  Network: use --host to expose
  ➜  press h + enter to show help

  LARAVEL v13.7.0  plugin v3.1.0

  ➜  APP_URL: http://localhost
```

4. Coba register dan login di http://127.0.0.1:8000/register



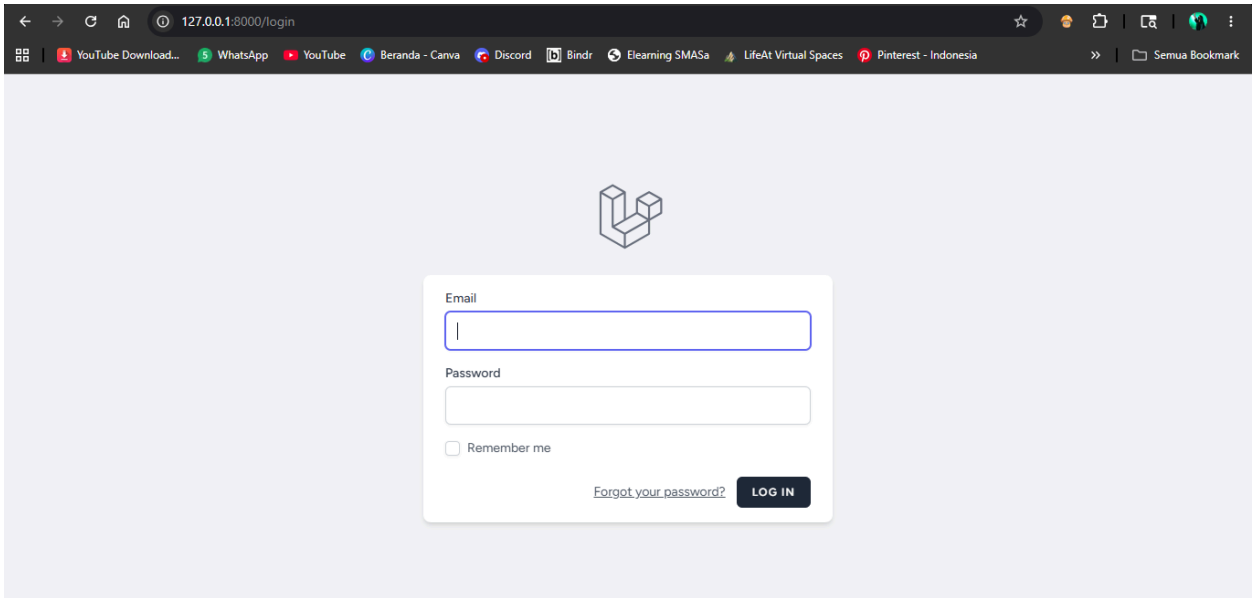


5. Amankan semua route mahasiswa dengan middleware auth: Route::middleware ('auth')->resource('mahasiswa', MahasiswaController.class)

```
use App\Http\Controllers\MemberController;

Route::middleware('auth')->group(function () {
    Route::resource('member', MemberController::class);
});
```

6. Coba akses /mahasiswa tanpa login pastikan diredirect ke halaman login



7. Tambahkan nama user di navbar. {{ auth()->user()->name }}

resources > views > member > index.blade.php

```php
<nav>
    <div class="menu">
        <a href="#">Kontak</a>
    </div>
    <div class="nav-search">
        <input type="text" id="navSearch" placeholder="Cari...">
        <button id="searchToggle">
          <i class="fa fa-search"></i>
        </button>
    </div>
</nav>

<div class="user-info">
    @auth
        <span>Selamat Datang, {{ auth()->user()->name }}</span>
    @endauth
</div>
```

8. Buat custom middleware CekAdmin yang hanya mengizinkan user dengan role 'admin' mengakses route tertentu

```php
    public function handle(Request $request, Closure $next)
    {
        // Cek apakah user sudah login dan apakah rolenya admin
        if (Auth::check() && Auth::user()->role == 'admin') {
            return $next($request);
        }

        return redirect('/')->with('error', 'Anda tidak memiliki akses admin.');
    }
}
```

9. BONUS: Modifikasi index() Controller agar hanya menampilkan data yang dibuat oleh user yang sedang login

```php
    public function index()
    {
        $userId = Auth::id();

        // Tambahkan Member::query() agar VS Code lebih mudah mengenalinya
        $members = Member::query()->where('user_id', $userId)->paginate(10);

        return view('member.index', compact('members'));
    }
```
